

LAB N°06

- 1- Install two VMs (1Gb of RAM), one as a **server** and the second as the **client**.
- 2- Install on the server the nfs server packages.
- 3- Create two directories (**/nfs_read** and **/nfs_write**) and configure the share of them. Where **/nfs_read** is in read only and **/nfs_write** in read_write mode.
- 4- On the client VM, install the packages for nfs client.
- 5- Configure the NIC of the VMs.
- 6- Mount the two shared directories.
- 7- Test the nfs connection.
